

Marker Straps

FOR CATTLE

Assembly and Application in five simple stages:

1. Take one strap, two retaining sleeves and the Brass Buckle and you are ready to go.
2. Slip one retaining sleeve onto each end of the strap.
3. Feed both ends of the strap through the centre section of the buckle. Then pass the strap through left and right sections as shown in the diagram.
4. Once each end has been fed through, slip over the animals head and pull on each strap until snug against the neck. Feed any loose strapping under the retaining sleeves and the strap is fitted.
5. Retaining sleeves should sit approximately 2cm above the buckle. Cut off surplus straps remembering to allow for growth. Check regularly and adjust accordingly.
